The need for innovative engineers has never been greater. Scientists and engineers are only 4% of the US workforce but drive up to 85% of the nation's GDP. The Cockrell School of Engineering is helping address the need by educating 7,800 students every year, many of whom will join you at National Instruments or follow in the footsteps of Dr. James Truchard as entrepreneurs. However, our top 10 program is educating tomorrow’s leaders in exhausted and overcrowded facilities. The EERC will transform the UT campus by providing 430,000 gross square feet of open and flexible space for interdisciplinary teaching, research, and hands-on projects.

Currently, most engineering students only participate in a design project their senior year. In the EERC’s National Instruments Student Project Center, lab-based projects will bring engineering fundamentals to life for every student, every year.

Longhorn alumni at National Instruments are joining forces to name the Measurement and Instrumentation Lab within this 23,000 square foot NI Center. Be a part of history by making your pledge today. Gifts above $1,000 will be recognized in the lab, and any gift is payable over five years.

*Leave your mark on the UT campus.*
*Invest in the future engineering leaders at National Instruments, in Texas, and around the world.*
What starts here changes the world.
